

The Cleveland Bridge and Engineering Co. Limited

Bridge Builders - Constructional Engineers and General Contractors

Darlington - England

This 1930s catalogue was compiled to show some typical examples of work carried out by the Company and to promote the company at home and abroad.

The catalogue is divided into two sections, the first showcases bridges built by the Company and highlights bridges such as the Victoria Falls Bridge over the River Zambesi, the King Edward VII Bridge over the River Tyne at Newcastle and the Boothferry Bridge over the River Ouse.

The second section highlights buildings, structures and general contracting work such as Paddington Goods Shed, Karachi Airship Mooring Mast, and a Steel Dome for Toronto University.

It has basic information and clear photographs and is a good introduction to this well-known company. Of course there is a range of other material about Cleveland Bridge in the collection and of other local companies too. Please ask staff for further details or search our online catalogue.
